

'Here' Film Reunites 'Forrest Gump' Stars Tom Hanks and Robin Wright, Showcasing De-Aged Characters | 1

Tom Hanks and Robin Wright, celebrated for their roles in the iconic film "Forrest Gump," are reuniting for a new movie 'Here' that promises to be another epic love story. Directed by Robert Zemeckis, who also directed "Forrest Gump," the film "Here" is set to captivate audiences with its innovative storytelling and emotional depth.

The Film's Unique Concept

"Here" is based on Richard McGuire's 2014 graphic novel of the same name. The story unfolds in a single living room over the course of a century, portraying the lives of various characters and the evolution of the space itself. The camera remains static throughout the film, capturing the changes in the room from prehistoric times to the modern era. This unique approach highlights the passage of time and the continuity of human experience in a single location.

De-Aged Performances

One of the most intriguing aspects of "Here" is the use of de-aging technology to portray Hanks and Wright's characters, Richard and Margaret, over several decades. First-look images released Tuesday show the actors in their roles as high school sweethearts who eventually become spouses. The film's innovative use of technology allows the characters to be seen at different stages of their lives, from their youth to their elderly years.

A Cinematic Journey Through Time

The first trailer for "Here" was released on Wednesday, offering a glimpse into the film's ambitious narrative. The footage showcases the static shot that remains unchanged, capturing the same location over many years. Viewers are transported from a time when dinosaurs roamed the Earth to the modern day, witnessing the construction of the house where Richard and Margaret live. The trailer teases a story filled with emotional highs and lows, as the characters navigate their lives in the same room over the decades.

Stellar Cast

In addition to Hanks and Wright, "Here" features a talented ensemble cast. Paul Bettany, known for his role in "WandaVision," plays Richard's father despite being 14 years younger than Hanks in real life. Kelly Reilly ("Yellowstone") joins Bettany as Richard's mother. The film also stars Michelle Dockery ("Downton Abbey"), Gwilym Lee ("Bohemian Rhapsody"), David Fynn ("The Pembrokeshire Murders"), and Ophelia Lovibond ("Minx"), adding depth and diversity to the story.

Release Date and Anticipation

"Here" is set to be released on November 15, promising to be a significant cinematic event. The film reunites the creative team behind "Forrest Gump," with Robert Zemeckis directing and co-writing the script alongside Eric Roth. The anticipation for "Here" is heightened by

the fact that "Forrest Gump" will celebrate its 30th anniversary next month, reminding audiences of the timeless magic that Hanks, Wright, and Zemeckis can create together.

The Human Experience

According to a Sony press release, "Here" is described as an "original film about multiple families and a special place they inhabit." The story travels through generations, capturing the human experience in its purest form. Zemeckis emphasized the importance of the performances in bringing this story to life, noting that Hanks and Wright had to channel their younger selves and adjust their energy, posture, and voices to fit the different stages of their characters' lives.
