

The Origin story of Superboy (Conner Kent): Superboy is a modern update of the original Superman, who is a younger version of Superman. He is also known by his Kryptonian name Kon-El and his human alias Conner Kent. Superboy is a hybrid of a human and a Kryptonian, cloned from Superman and his archenemy Lex Luthor. Conner Kent, also known as Alexander "Lex" Luthor, LX-15, and Kon-El, is a Human/Kryptonian hybrid clone created from half of Clark Kent's DNA and half of Lex Luthor's DNA.

The **Origin** Story of Superboy

Investigating Harvest's past reveals that he was a colonel who fought meta-humans. His animosity for them was sparked by the murder of his son by a metahuman. Harvest, who had made a promise to eradicate all metals, went back in time to capture Jon Lane Kent, the son of Superman, and Lois Lane, who was close to passing away because of his genetic instability. Harvest saved Jon and taught him how to control Meta. The genetic instability affected Jon once again as an adolescent. Harvest went back in time to create Superboy using the genetic DNA from Jon's parents. Harvest can revive Jon using Superboy's genetics.

The brazen young attitude that characterized his first appearances was a result of him being a Superman clone that was hatched too early at the Cadmus Labs. Superboy insisted on being called something else when he first began his fictitious life as a hip (by mid-90s standards), an irreverent clone of Superman.

The Origin story of Superboy (Conner Kent)

Various Versions

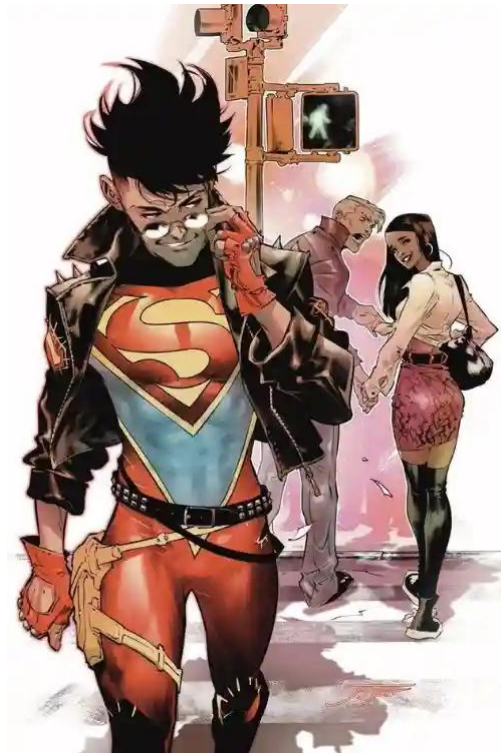

A potential future Conner Kent was introduced in *Titans Tomorrow*. This version has matured and become more powerful: In addition to his fully evolved Kryptonian abilities, his tactile telekinesis has improved to the point that he can now make shields. He's built the Fortress of Paradise close to Smallville, where his "Pa," Lex Luthor, now resides. He and Captain Marvel Jr. competed at one point for Cassie Sandmark's devotion, the new Wonder Woman, but Conner won.

Tactile-telekinesis

"Tactile telekinesis," a telekinetic force field that surrounds Superboy's body like a shield and grants him strength, flying, and invulnerability, is initially his lone superpower. By pushing the field between the various components of machinery and other complicated creations, tactile telekinesis also enables Superboy to disassemble them; alternatively, if

they are about to fall apart, he may temporarily hold them together. He can perform the same feat with solid masses that are splintered, such as a cracked slab of stone; he can also manipulate aggregate solid masses like volumes of sand or dust, in the same way, causing the individual particles to fly apart explosively to create particle clouds or a forceful attack.

The Origin story of Superboy (Conner Kent)

Kryptonian abilities

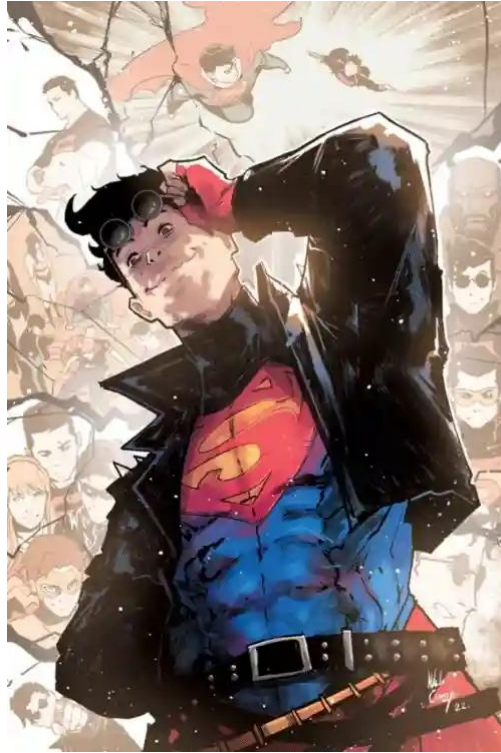

Superboy develops superpowers other than tactile telekinesis as his Kryptonian physiology develops, including heat vision, x-ray vision, and super-hearing. He discovered that his telekinetic powers have improved and are no longer restricted to tactile telekinesis. He has also grown stronger, more resilient, and quicker. Later, Superboy claims to have acquired telescopic eyesight. He was also shown to be far faster in Teen Titans, flying with Nightwing from San Francisco to the Arctic in under an hour. He later had the opportunity to compete in a global footrace with Kid Flash.

Equipment and attire

When Superboy makes his debut, he wears a modified Superman outfit, a faded hairstyle, two belts, an earring, gloves, and a leather jacket. His appearance was intended to be a parody of superhero outfits from the 1990s. With a fresh hairstyle and jacket, his second outfit is a slightly altered replica of his first. In his third attire, he sports trousers and a black S-shield T-shirt, which is more like what he wore when he first lost his powers but without the accessories and gloves. He has a current, short hairstyle. Superboy dons the traditional Superman outfit in the “Superboy and the Legion” narrative, but with a Legion belt buckle. He grows his hair to match Superman’s throughout the five months he spends in the future.

1. After assisting Professor Emil Hamilton, Superboy receives “super-goggles.” The majority of Superman’s visual abilities, such as heat vision, x-ray vision, and telescopic vision, are imitated by the goggles.
2. Geoff Johns and Dan DiDio have said that the choice to kill off the character had nothing to do with the legal dispute and that they could have simply given the character a new name, even though DC Comics does not hold the right to the name “Superboy.”
3. Due to the legal conflict, a Superboy graphic in the Teen Titans’ Secret Origins, a backup story in the weekly 52 (comic book) series, had to be replaced with a Wonder Girl image.
4. Match’s (DC Comics) emblem, which is a reverse of Conner’s, is concealed on the cover of Teen Titans #47.

The Origin story of Superboy (Conner Kent)

Superboy is a modern update of the original Superboy, who is a younger version of Superman. He is also known by his Kryptonian name Kon-El and his human alias Conner Kent. Superboy is a hybrid of a human and a Kryptonian, cloned from Superman and his archenemy Lex Luthor.

The clone received implanted memories and underwent a synthetic maturation process to mimic the real Superman's aging process. However, this clone came out of his cloning tube too soon and was a teenager. He first went by the name "Superman," but eventually adopted the name "Superboy."

Conclusion

When "Superboy" first appeared in print in 1949, tales centered on the exploits of a young Clark Kent utilizing his abilities to aid others were published. However, it was decided that there would be no Superboy in the new timeline and that Clark Kent's abilities wouldn't

appear until he was on the edge of early adulthood when John Byrne's Man of Steel mini-series revised Superman's origin in 1986. The Superman editorial staff later concluded that the Superboy idea was still worth investigating, which led to the creation of a brand-new Superboy who could connect with contemporary youths more successfully. Later, this Superboy would adopt the name Conner Kent and become a member of the Superman family.
